Team ID	UNM1425COMICCRAFT
Project Name	COMICCRAFT
Maximum Marks	3 Marks

Project Executable Files

This section requires submission of all executable and deployable files for your project. Ensure all files are properly organized, named, and uploaded to the specified submission platform. The evaluator must be able to run or deploy your solution using the provided files and instructions.

Step 1: Submission Checklist

S.No	Item to Submit	Submitted (Yes / No / NA)
1	Complete source code (all files and folders)	Yes
2	README / Setup Guide (instructions to run the project)	Yes
3	requirements.txt / package.json / dependency file	Yes
4	Database schema / seed files (if applicable)	NA
5	Environment configuration file (.env.example or similar)	Yes
6	Deployed application URL (if hosted)	NA
7	APK / Executable binary (if applicable for mobile/desktop apps)	NA
8	Dockerfile / Containerization config (if applicable)	NA
9	Test files and test results	Yes
10	Demo video or walkthrough (if required)	NA

Step 2: File / Folder Structure

Provide an overview of your project's file and folder structure below:

```

comiccraft/
├── app/
│   ├── main.py           # FastAPI application entry point
│   ├── routes.py         # All page/API routes and workflow
│   ├── gemini_flash.py   # generate_outline() - Gemini Flash
│   ├── gemini_pro.py     # generate_story() - Gemini Pro
│   ├── image_generator.py # generate_image() - Stable Diffusion
│   ├── layout_builder.py # build_comic_layout()
│   └── exporters.py      # save_pdf() - PDF export (FPDF)
├── templates/
│   ├── index.html        # User input form
│   ├── comic_preview.html # Comic preview page
│   └── export_success.html # Export confirmation page
├── static/
│   ├── panels/           # Generated panel images
│   ├── exports/          # Exported comic PDFs
│   └── fonts/            # Fonts for PDF generation
├── .env                  # Environment variables (API keys)
├── requirements.txt      # Python dependencies
└── README.md             # Setup and run instructions
  
```

Step 3: Deployment / Access Details

Field	Details
Hosted / Deployed URL	Not hosted - runs locally at http://127.0.0.1:8000
Login Credentials (Demo)	Not required - the application has no login
Platform / Hosting Provider	Local deployment (FastAPI served with Uvicorn)
Repository Link	(https://github.com/rpooja31bca2025-netizen/pooja-Pooja)
Demo Video Link	(https://drive.google.com/file/d/1HoF0Fvg7AtOP5ICLNgwL8gTCIkGTeJhB/view?usp=drivesdk)

Step 4: Run Instructions

Provide clear, step-by-step instructions for the evaluator to run your project locally:

Pre-requisites:

Python 3.9+ with pip, Git, a Gemini API key, a Hugging Face API token and an internet connection (a GPU is optional but speeds up image generation).

Step 1: Clone the repository: `git clone <repository-url>` and open the folder `cd comiccraft`

Step 2: Create a virtual environment: `python -m venv env`

Step 3: Activate it: `env\Scripts\activate` (Windows) or `source env/bin/activate` (macOS/Linux)

Step 4: Install dependencies: `pip install -r requirements.txt`

Step 5: Configure environment: create a `.env` file in the project root with

`GEMINI_API_KEY=your_gemini_api_key_here` and `HF_API_KEY=your-huggingface-api-key-here` Step

6: Start the application: `uvicorn app.main:app --reload`

Step 7: Open the browser at `http://127.0.0.1:8000` (API docs at `http://127.0.0.1:8000/docs`)

Step 8: Fill in the story form, click Generate Comic, review the preview and download the PDF.

Step 5: Known Issues / Limitations

S.No	Known Issue / Limitation	Workaround / Status
1	Image generation with Stable Diffusion is slow on CPU-only systems.	Use a GPU-enabled machine; allow extra time for the 5 panels.
2	Runs only on a local server; not hosted online.	Cloud deployment planned as a future enhancement.
3	No user accounts; only one comic is generated at a time.	User profiles and comic library planned for the future.
